APPENDIX C

POPULATION

We reported last year on the population of machines and commented on the rapid growth in the previous three years.

We forecast that the continuing demand would be dampened by known Government policy - and that higher utilisation and increasing use of data transmission would result.

These predictions have been largely borne out by information provided in the survey, and by reports gathered from a number of interviews.

For the purpose of this survey, "Population" is taken to be the total of all machines whether installed or on order.

Owners

The population of computers has increased as follows:

1966 Population	104
1967 Orders Cancelled	<u>4</u>
	100
1967 New Orders	<u>17</u>
	<u>117</u>

Two of the cancellations were reported as being due to economic conditions, and one is for a machine being replaced by a competitor's computer of a later generation.
